Tomcat Https

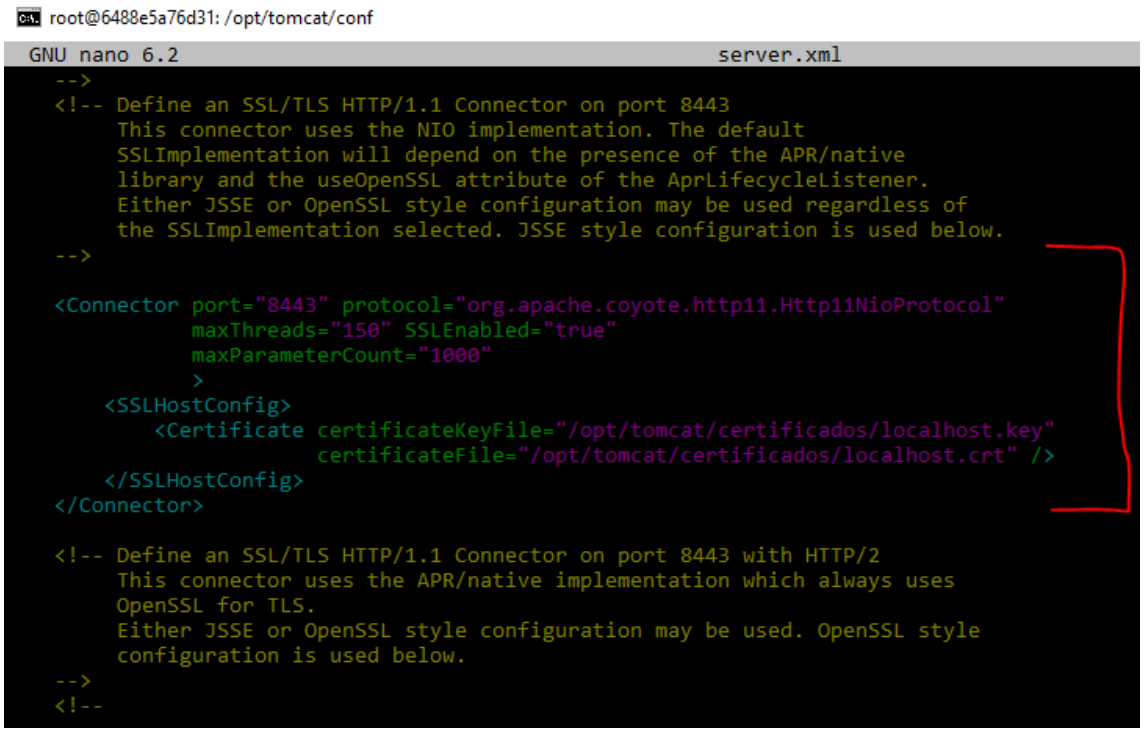

```
docker build -t mi-tomcat-ssl ^
 -f ./Dockerfile_para_SSL .
```

```
docker run -d --name tomcat ^
 -p 8081:8080 -p8080:80 -p 8443:8443 ^
 -v %cd%/web:/opt/tomcat/myapps ^
 -v %cd%/certificados:/opt/tomcat/certificados ^
 mi-tomcat-ssl
```

```
apt update
apt install nano
```

```
cd /opt/tomcat/conf
nano server.xml
```

```
<Connector port="8443" protocol="org.apache.coyote.http11.Http11NioProtocol"
           maxThreads="150" SSLEnabled="true"
           maxParameterCount="1000">
      <SSLHostConfig>
        <Certificate certificateKeyFile="/opt/tomcat/certificados/localhost.key"
                     certificateFile="/opt/tomcat/certificados/localhost.crt" />
      </SSLHostConfig>
  </Connector>
```

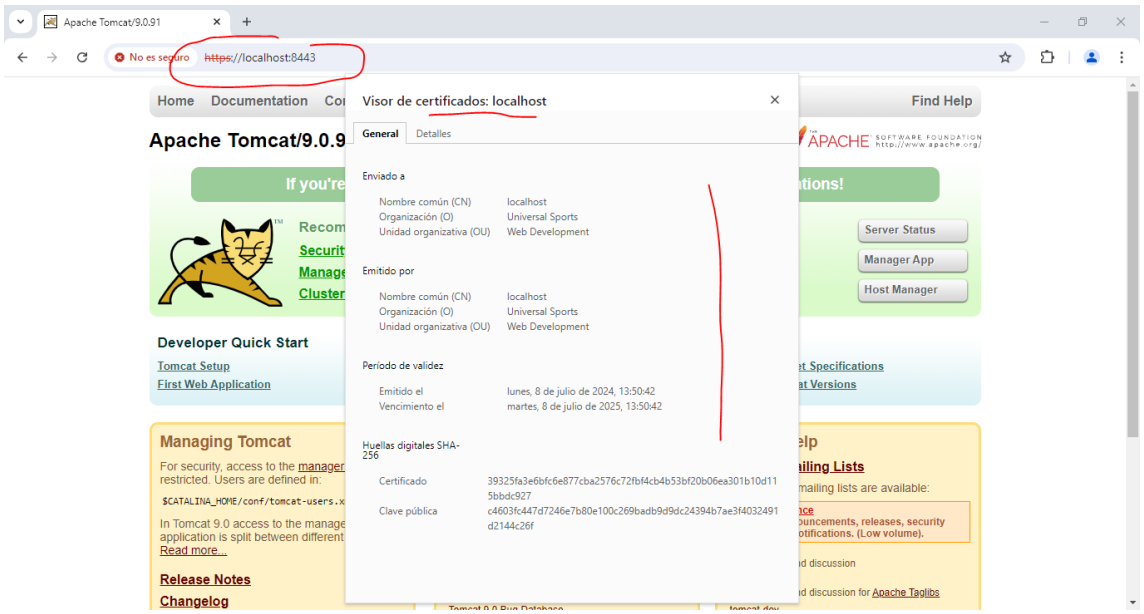

Instalamos unas librerías…

```
apt-get install libapr1 libtcnative-1
```

Y reiniciamos Tomcat y ya funciona.
